Rafael-

Great info that you were able to share in the data maps. Is the data that was used to make the maps that you sent available as raw data? What I would like to get is the ID pt, GPS coordinate, constituent, and result as in excel so that I can make it into a GIS layer. As well do you have the sampling plan that was developed so that I can get a complete list of analyte sampled for. I am only interested in the data from soil sampling. The intended use of the data is to ensure that soil that is excavated is properly characterized for disposal.

Thanks
